

A Friendly Marketer

The Florida Friendly Plants program has changed the way mass merchandisers deal with growers.

or the first annual GPN/John Henry Company Creative
Marketing Award, we wanted to really make a statement —
one that says "Now this is a successful marketing program."
And that is why I am so excited to announce that Riverview
Flower Farm, Riverview, Fla., is the 2005 winner for its
Florida Friendly Plants program. You will see in the next few pages just
why this program is such a winner.

THE COMPANY

Brothers Rick and Dave Brown, owners of Riverview, began the business after transforming the large Florida vegetable plug producer where they had been working into an operation more focused on ornamentals. After such a successful transformation, they decided it was time to start their own place. And so, in 1982, Riverview Flower Farm was born. Back then it was just a 3-

acre operation producing 4-inch annuals, garden mums and poinsettias for local independents. Now, Riverview with more than 30 acres of production, is one of the largest green goods suppliers to Home Depot stores throughout Florida. "We are nearing 30 million units sold under Florida Friendly Plants, which we offer exclusively to the 112 Home Depots we service in Florida's climate Zones 9 and 10," said Rick.

"Here in central Florida, many of the new patented vegetative annuals perform as perennials," said Rick. "We also stock traditional Florida perennials like lantana, pentas, Mexican petunia and milkweed in job-lot quantities. Landscapers can load up dependable and easily recognized perennials from our tables to finish their projects or install instant butterfly gardens for their clients."

Producing high-quality plants has always been a top priority for Riverview. Rick and Dave have turned over the growing decisions to a strong team of growers and assistants. Head grower

The Award

You may have noticed something different about our marketing award this year. We decided to make quite a few changes — starting with the whole thing. While our new award is still a marketing award, the *GPN*/John Henry Company Creative Marketing Award focuses solely on one particular commercial greenhouse grower.

We here at *GPN* and the folks at the John Henry Company see quite a few greenhouses throughout the year, so we have decided to give the award to a grower who is nominated by the *GPN* staff, John Henry Company or *GPN*'s Editorial Advisory Board, and then voted on by the *GPN* staff.

We have also decided to award one winner for its creative program's successful implementation into the marketplace — whether it be into a mass merchant or an independent garden center. So look out because we'll be watching you!

Creative Marketing Award

Jeff Lewis has been key in maintaining and improving the high quality standards set by Rick and Dave.

THE PROGRAM

In the late 90s the Browns developed what has become one of the most recognized and successful mass merchant brands in the industry. They started by keeping the tables full of high-quality, good-performing color and Florida native plants. "Even though we still grow a lot of native plants, we're not relying on natives — that's so limiting because there are so many good plants you can grow in Florida," said Rick.

Riverview then matched good product and good service with a very descriptive name. "We were looking for something that said right plant/right place," said Rick. Thus, Florida Friendly Plants was born. Immediately the thought came to mind that this name would limit Riverview's selling region, but Rick and Dave were okay with it, realizing that was their only ambition at the time.

The program started a little differently than most marketing programs in our industry. Instead of throwing a logo onto everything possible, Florida Friendly Plants started with only a tag — that's right, a lone, standard tag. According to Dave, "We conceived of the program about the same time we were trying to develop our own plant tags through Economy Label. After we labeled it we decided it was something we needed to trademark." And so they did; since then, they've been capitalizing on the slogan's popularity by putting it on signs, tags, banners, trucks, etc.

Though the Browns took very slow steps, the program was soon sprinting. "Our goal in 2002 was to expand our 40-store West Florida territory to the Orlando market and add 12 more stores," said Rick. "When we made our pitch to our Home Depot buyer, Cathy Pruitt, she surprised us with the territory we requested and challenged us to bring the same success to the 55 stores in the eastern half of the state." It's pretty safe to say they met their goal.

The retailer has a lot to be happy with also. According to Rick, Florida Friendly Plants vastly outsells the same non-branded product at competing big boxes, which might even be located at the same major intersections.

"Business is up significantly with the new Vendor Managed Inventory program [pay-by-scan] that started here in the Florida Home Depots in February," said Rick. "From our perspective, the Home Depot executives were right in recognizing the opportunities of letting their strong core vendors drive the business. We keep the stores full and fresh. We bring the product to the market when and where it is the most likely to sell. We track the rate of sale and take inventory every day in each of our stores."

The brand sells, but the product has to live up to the name. Plants from other brands are sold under the Florida Friendly Plant brand if they can survive the hot and humid climate. "I've heard John Gaydos at Proven Winners tell a group of people that Riverview Flower Farm is the largest angelonia grower in the country," said Rick. "Angelonia survives here as a perennial. Plectranthus 'Mona Lavender' which bears the Simply Beautiful brand is also an integral part of the program, as it blooms nearly year-round in both sun and shade and is becoming one of the most popular premium varieties we offer."

The brand is successful in selling 1-gal. color at a higher price than competitors in what is one of the lowest price markets in the country. Just how well

does it sell? It took Riverview out of one category and put them into another — the higher price point. "Building on the success of the brand allowed us to increase the prices on all of our products. "We try to target the demographics and buying trends of each store. In more affluent neighborhoods we can significantly increase dollars per square foot by stocking higher priced premium annuals and premium perennials on the limited space we have in these stores," said Dave.

Florida Friendly Plants also proves that many marketing programs can exist within one store. VIVA! Herbs and VIVA! Plants, developed by Altman Plants, Vista, Calif., have been a success in Florida Home Depot stores as well. "The two brands are going to co-exist in Florida, so the full advantages of both can be realized," said Rick. "VIVA!

will grow and evolve as a generic, catch-all brand with national advertising support, whereas Florida Friendly Plants is more specific, with regional varieties and labeling specific for each variety."

THE DISPLAY

Rick says it best: "A brand is of no value when the display is weak. If it is not fully stocked with plants that say 'Wow!' we feel like we have missed sales and wasted the space, effectiveness and perception of the brand."

Florida Friendly Plants is unique in its display as well. While some stores like the plants blocked and shoppable from just one side of the bench, the Florida Friendly Plants display allows shopping the same product from both sides of the bench. Riverview has thought long and hard about this issue, and in its Garden Associate Apron Reference Guide (more on that later) it provides reasons to "stripe" the product. Here are just a few:

- Provides high-color contrasts, which suggests ideas for plant combinations.
- Offers customers two passes by the product as they walk up and down aisles.
 - Striped rows are easier to keep neatly aligned with signs.

For the past four years, Riverview has had its logo, planting information, category or plant name, UPC and price attractively printed on the containers. This has greatly enhanced the brand recognition with the consumer.

Riverview uses a color-coded system to distinguish price points for the customer and the cashier: Black pots retail for \$1.97 and contain plug started annuals; green pots retail for \$2.97 and contain standard perennials for climate Zones 9 and 10; terra cottacolored pots retail for \$3.97 and contain premium annuals and premium perennials; and white pots retail for \$4.97 and contain grasses and accent plants.

"I recently heard that 85 percent of retail garden center customers are female, and they spend an average of 20 minutes in the store," said Rick. "We spend a lot of time watching customers. My personal observations lead me to think that percentage of females is high — at least in Florida Home

Support materials for the program include over-size tags and the Apron Reference Guide.

Depot stores. And since our average customer is older, with many retirees living here, they are spending more than 20 minutes in the garden center. They are in a study mode when they get to our tables. The more information and confidence you can clearly and quickly communicate, the more of your plants they will put in their cart."

THE EXTRAS

Growers constantly hear, "think of the consumer; the consumer needs to know this; you have to market to the consumer." Of course that is all so true, but don't forget about your customer — the retailer. The Florida Friendly Plants program works because Riverview makes sure the retailer has sufficient tools to relay pertinent information to the consumer.

Among the many things this program provides to the retailer (searchable Web site; pre-priced containers with instructions; picture tags; variety signs with images, descriptions, key features, price and SKU; bench wrap featuring the recognizable butterflies and logo; and large planting idea signs) is the Garden Associate Apron Reference Guide, a 36-page pocket-sized guide containing photos and information about Florida Friendly Plants all for employees helping customers.

The guide contains answers to many consumers' questions, including sun or shade; how big does it grow; is it a Florida native; and does it attract butterflies or hummingbirds. It even includes information the retailer needs to know, such as the season it is available and what season it is in color. According to Dave, the idea came from Stacy's Greenhouses, York, S.C. "It has been an overwhelming success," said Dave. "It has been just amazing how many people use it — from cashiers to all of the store employees. A lot of times, they'll call up and say, 'when are we going to get XYZ plant,' and we'll say, 'well look in your Apron Reference Guide.""

THE FINAL WORDS

Just as the program grew little by little, it is still going forward. The Florida Friendly Plants program recently added ornamental grasses to its mix and has had good sales so far.

Just as any good businessperson should, the Browns are always thinking of new and effective facets to Florida Friendly Plants. Who knows what the next few years will bring? Whatever it may be, I'm sure it will be creative and successful.
