

SPRING COLLECTION — 2004 INTRODUCTIONS

'Vanilla Butterfly', 'Superbells™ Pink Kiss' and 'Flying Colors™ Trailing Red'

'VANILLA BUTTERFLY'

Argyranthemum frutescens

For years the most popular *Argyranthemum* available has been Proven Winners' bright yellow Butterfly with its large flowers, vigorous habit and excellent heat tolerance. It is often the only *Argyranthemum* to flower all summer in hot climates. The addition of 'Vanilla Butterfly', which has the same growth characteristics, is sure to be a hit with both growers and consumers. The flowers on Vanilla Butterfly range in color from soft cream to pure white and it can easily be produced beside Butterfly since both varieties utilize the same growing routines. Vanilla Butterfly is excellent in large containers and landscapes.

SUPERBELLS™

Calibrachoa hybrid

Superbells debuted last year with five great colors. This series has been developed and selected to have large flowers, disease tolerance (Theleviopsis, Pythium, and Phytophthora), vigor and strong summer performance. The growth habit is mounded with plants neither as tall as 'Million Bells® Terra Cotta' nor as prostrate as 'Million Bells® Trailing Blue'. This habit is great for mono-crop pots and baskets or combination planters and also performs well in landscape plantings. To the original five we are adding four additional varieties. New this year are 'Superbells™ Cherry Red' and 'Superbells™ Pink Kiss', a blush pink with a dark pink ring around a yellow throat. These two varieties have the same great habit as the original Superbells varieties. We have also added 'Superbells™ Trailing Blue' and 'Superbells™ Trailing Rose' which have prostrate habit and can take the place of 'Million Bells Trailing Blue' and 'Million Bells Trailing Pink' respectively. There are now a total of nine great colors available: 'Superbells™ Blue', 'Superbells™ Cherry Red', 'Superbells™ Coral Pink', 'Superbells™ Pink', 'Superbells™ Pink Kiss', 'Superbells™ Red', 'Superbells™ Trailing Blue', 'Superbells™ Trailing Rose', and 'Superbells™ White.'

'Superbells Trailing Blue' and 'Superbells Trailing Rose' are in parenthesis where different

FLYING COLORS™

Diascia hybrid

Diascias are one of the best window box and mixed container plants available. Its airy habit and dainty flowers mix well with a wide variety of plants. The Flying Colors™ line comes from The Netherlands and has won awards for its summer performance, earning Best of Show honors at the Colorado State University Trials. Its tremendous flower production and large flower size create wonderful contrast with the deep green foliage and strong growth habit. It is cold tolerant and makes a great early spring or fall variety and has enough vigor and heat tolerance to flower throughout summer. New this year is 'Flying Colors™ Trailing Red' whose habit and performance is similar to existing variety 'Flying Colors™ Trailing Antique Rose'. The total number of varieties for the series is now four: 'Flying Colors™ Trailing Red', 'Flying Colors™ Trailing Antique Rose', 'Flying Colors™ Apricot' and 'Flying Colors™ Coral'.
